

Practical 11

Nidhi Bhatt-J006

This practical is based on You only look once or YOLO which is a state-of-the-art, real-time object detection system. On a Pascal Titan X it processes images at 30 FPS and has a MAP of 57.8% on COCO test-dev. By default, YOLO only displays objects detected with a confidence of .25 or higher. You can change this by passing the -thresh flag to the yolo command.
